
Sprint 0

14th April 2021

Overview

For Sprint 0, the goal was to implement the main page which would contain all the necessary information, and to kick start our project by setting up Git and Trello as well as the framework for building our website.

Non-functional Requirements

1. The system handles personal information of sensitive nature, so data exchange must always be encrypted.
2. Data is provided by the users, but if a longer period of time passes without the user being active it should be deleted.
3. Website must ensure 24/7 operation.
4. Along with the product, the final report should also be included which would contain templates/tools that were used, the future of the project, the structure and, the guidelines for use of the product.

Roles

Product owner: Marko Janković

Scrum master: Marko Janković

Developers: Marko Janković, Nedeljko Bošković

Tools

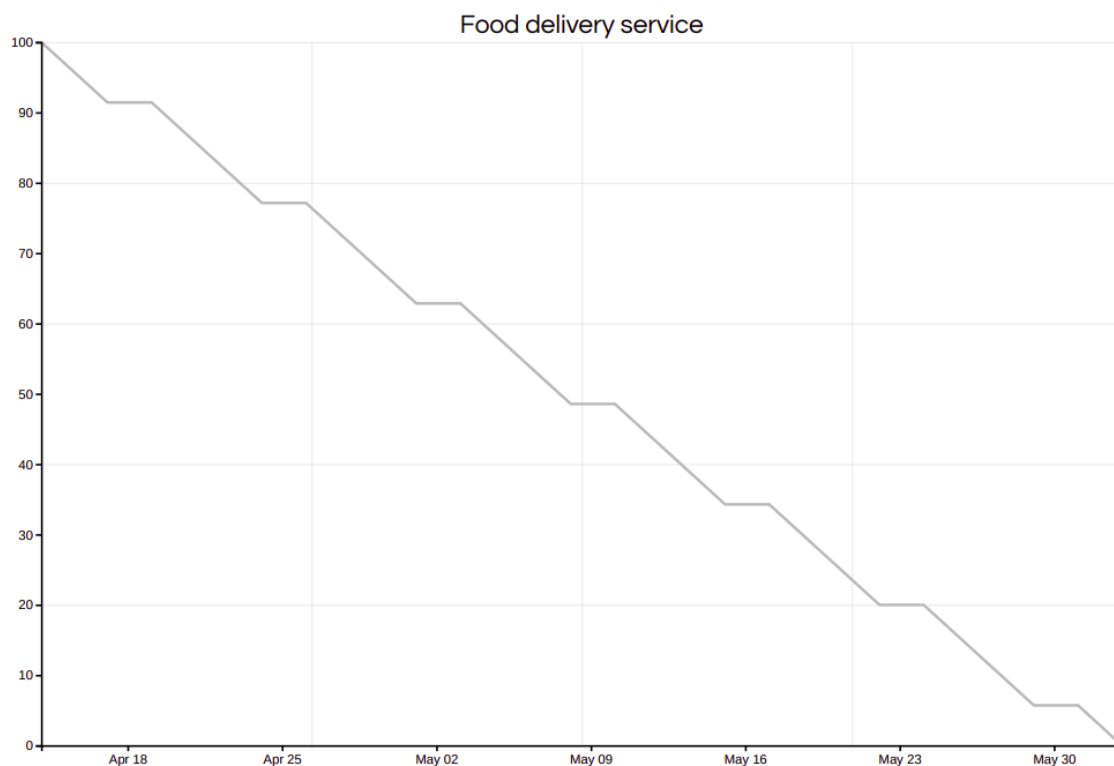

Github: <https://github.com/MarkoJankovic3/food-delivery-service>

Trello: <https://trello.com/b/yOvtTcLi/food-delivery-service>

Sprint Roadmap

- 14.4. Setting up the main page - Main page with all the necessary information
- 21.4. Register/login - every user should be able to register on this website, or log in if an account already exists.
Menu - menu with the displayed food and beverages that are available in the restaurant.
- 5.5. Shopping cart - selecting food and beverages and ability to put it into a shopping cart
- 12.5. Paying with credit card / PayPal - users should be able to complete their order by paying either with a credit card or PayPal.
- 19.5. Ratings - users should be able to leave a rating on every meal that is offered by the restaurant.
- 26.5. Contact page - all of the necessary information that is required for customers to contact the restaurant is located on this page.
- 02.06 Final presentation.
